

## **WORKING TITLE:**cricRGUKT

(A cricket score board system for RGUKT students)

### **ABSTRACT:**

The project entitled "cricRGUKT" is a cricket scoreboard system that is utilized by the user with an update of the cricket score even when the user is not watching the match. The website is mainly for RGUKT students and can be used during Department Premier Leagues(DPL) and other matches.

Each and every match details such as the description about the team and team members will be stored in the repository system in the form of a database. The live updates of the matches being played can be updated on this website and can be viewed by anyone.

As soon as someone checks the scoreboard, details of a particular player can be viewed with a single click on his name. This project aims to make a cricket scoreboard that will update the scores of a match. Cricket being a special part of the lives of many people, there will be many takers for such a system, and the ability to follow the match without seeing the video will make it interesting for many. A user who is unable to watch the event like someone who is busy with their work can easily check the scores on a regular basis and get updates on what is happening. The system will keep posting updated scores and the team line-up during the match. The admin will store upcoming match details and ensures that the team information is posted for the upcoming events, this will help the admin easily load information at the time of the match.

### **OVERVIEW:**

All details including the toss, matches already played, score, wickets, number of overs completed, number of 4s and 6s, details of a particular player, details of balls played in an over etc can be viewed.

A person who creates the match is the admin. After match creation, the admin must add the players who are going to play the match. After all the necessary details are entered, only the admin can update the scores and make other changes.

The scores and other updates of the match are displayed to the user once the user opens the website. There is no need of refreshing the website

every time to view updated scores, they and other fields will be updated automatically.

## FRONT END:

We use HTML, CSS, java Script, bootstrap for front end development.

## BACK END:

We use Php for backend development.

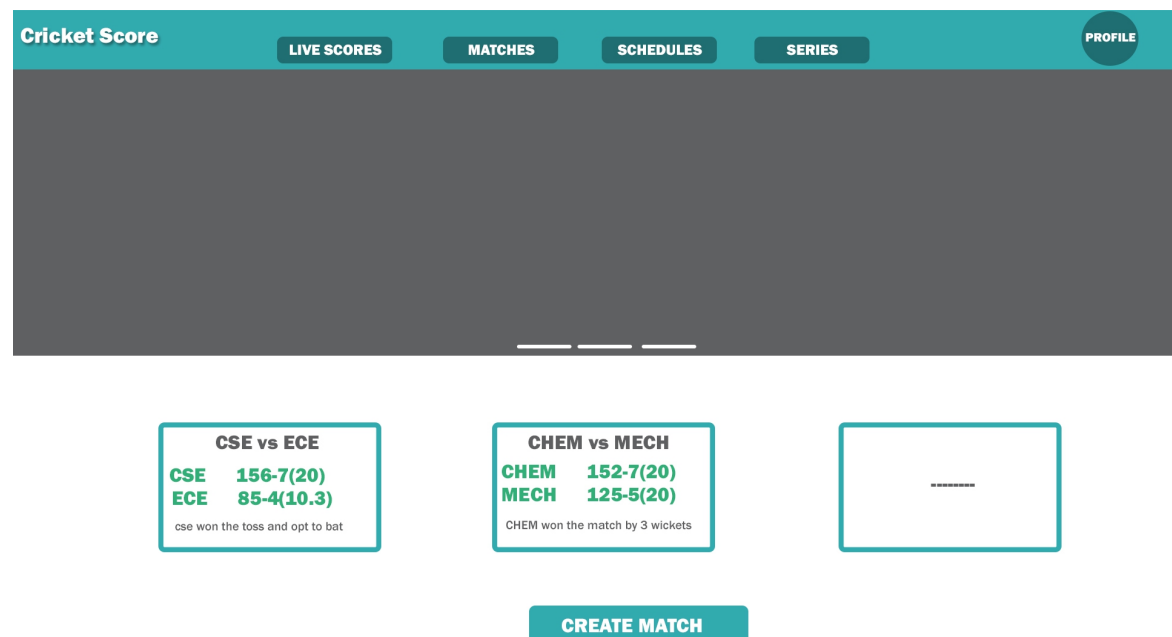

## DATABASE:

We use MySQL as database.

## PROTOTYPE:

### 1. Home Page:

It contains live scores, matches information, match schedules, match series, user information, pictures from the field. Latest match details is displayed first and the already held match scores are displayed next. An user can create a match by clicking on the CREATE MATCH button.

## 2. Create Match:

Admin can create match by entering the names of both the teams.
